Version 0.9.10

Filmmaker

- Added Cycles option for setting the number of frames to the end of a clip or session
- Render jobs now take up a lot less disk space for animations (static geometry is now stored shared instead of every frame)
- Slightly improved overall rendering speed
- Fixed rendering taking up your entire CPU resources when rendering with your GPU
- Fixed an issue where rendering several times consecutively could slow your PC down to a crawl
- Fixed VR renders being flipped horizontally
- Fixed a denoising issue which caused less than optimal denoising quality
- Fixed issue where the tiles in the final image would have mismatching sample counts and some tiles would be lower quality as a result
- Fixed render preview not being interactable when rendering VR images
- Fixed potential crash when doing a preview render with the Vulkan renderer being used

Engine

- Minor occlusion culling performance optimizations

- Greatly improved reflection probe rendering speed
- Fixed issue where entities would get rendered with error materials if their skin would exceed the max skin count of their model
- Fixed bone scaling not working correctly
- Fixed massive performance hit for light sources that cast shadows in the past, but had shadow casting disabled
- Fixed BSP occlusion culling not working for imported Source Engine maps
- Fixed meshes not being rendered if entity skin exceeds maximum skin count
- Improved lightmap implementation
- Various minor bug fixes and improvements
- Improved loading times when starting a game
